The Intermec IP4 Intellitag reader and Intermec 700 Series deliver a mobile RFID solution

May, 2006 – Melbourne, Australia –Gamma Solutions have released the Intermec IP4 Intellitag portable RFID reader. This accessory handle attaches to the popular Intermec 700 Series mobile computer and gives users a high performance mobile RFID solution.

According to Paul Fleming, Southern Sales Manager (Gamma Solutions), the introduction of RFID to an organisation will be achieved by staged implementation as suppliers, customers and internal systems progressively move from barcodes to RFID tags.

Paul Fleming commented, companies like Wal Mart had the clout to specify a universal date for adoption of RFID but most organisations would move to RFID over a period of time. “The new Intermec IP4 Intellitag Portable RFID reader fits the need for dual technology compatibility”.

Intermec’s IP4 Intellitag reader, combines the power of a handheld mobile computing device with PAN, LAN and WAN radios, as well as a multi-protocol RFID radio that can be used worldwide. Intermec RFID readers are the first to be compatible with the Gen 2 and upcoming ISO18000-6c RFID tags.

The combined unit will incorporate all the software, security, communication and rugged nature of the Intermec 761, 751 and 741 Series of mobile data collection units. The combined unit will fit the existing commanding profile the Intermec 700 series has established in the barcode scanning area.

Paul Fleming explained - a key benefit was the protection of a planned investment. “Whilst RFID may not currently feature in a system the move to adopt RFID was accelerating. By ensuring the compatibility of new equipment with RFID the investment was immune from obsolescence based around introduction of RFID technology.”

About Gamma Solutions

Gamma Solutions Pty Ltd (www.gammasolutions.com) is an Australian owned company, based in Melbourne with offices in Sydney, Brisbane, Adelaide and Western Australia. Founded in 1992, the company provides all the components of a mobile computing, RFID and data collection systems such as portable terminals, scanners, printers, wireless networks, middleware software and implementation services.
