

# Avalanche Telicost

Eliminate bill shock with real-time telecom expense management from Avalanche

Wavelink Avalanche Telicost is an innovative and powerful Real-Time Telecom Expense Management (R-TEM) SaaS solution, that allows small, medium and large businesses to dramatically reduce their telecom expenses. Avalanche Telicost proactively monitors, reports and analyzes data, voice, SMS and roaming consumption on your fleet of mobile devices.

## Real-time Expense Management versus Telecom Expense Management

Telecom Expense Management (TEM) systems analyze past bills from the carriers to determine if there were billing mistakes and search for ways to optimize telecommunication costs. The issue with TEM systems is that they analyze past expenses and do not forewarn of current or future potential expenses. Avalanche Telicost is able to analyze the carrier network usage in real-time and use predictive methods to help prevent costly, unexpected overages from occurring.

Wavelink Avalanche® is a comprehensive management solution for the wireless ecosystem that provides complete visibility and control of mobile devices, infrastructure and peripherals from a central web-based console. Avalanche improves the productivity of mobile workers, increases network security, and reduces the total cost associated with owning and managing mobile assets. Avalanche Telicost is an easy to use module for Avalanche.

## Cost Prevention

Real-Time Monitoring captures in-month events, such as roaming or overages and allows you to prevent these costs from occurring.

## Cost Optimization

How do you know what plan to buy for your users if you don't know how much they use? Avalanche Telicost lets you know exactly how much your users consume and will automatically choose the optimal plan for them.

## Security Benefits

Avalanche Telicost detects and alerts IT of anomalous events such as off-hour work habits, large data transfers, changes to personal usage habits, unsanctioned device/network usage and possible data leakage events.

## Personnel Management Benefits

Avalanche Telicost tracks the employee's use of corporate assets along with their GPS location to determine the extent of their use and whether they are being used for personal or work purposes. The IT Department can also hide apps and prevent users from modifying settings.

## Proactive Telecom Management

Telecom budgets are difficult to manage because contracts are dependent on usage. However, the IT Department is still responsible for managing costs with a fixed budget. Avalanche Telicost allows them to proactively manage this budget.

## Proven ROI

Avalanche Telicost typically pays for itself within the first month just from the carrier overage charge prevention. This does not even take into account the time management savings of running reports in Avalanche Telicost versus generating spreadsheets from carrier bills.

## Why Avalanche Telicost?

### Policy Enforcement

Interactive alerts to the user when they pass predefined usage thresholds. These require the user to acknowledge the alert and capture it in an audit trail. Enforce policies such as service cutoffs when the device is roaming or exceeds its plan limits.

### Usage Summary

Provides the user with a quick and easy way to monitor their own Data, Voice and SMS usage right on their device. The Plan Status icon will also give a quick visual queue of any usage alerts from any screen (just like a battery or signal strength meter).

### Usage Details

The user can also drill down and track usage details for Data, Voice and SMS. Including; remaining days in their plan, incoming versus outgoing minutes, roaming data versus home network usage, etc.

### Usage to Plan Reports

The Usage to Plan report will allow you to see the data, voice and SMS usage statistics from your fleet of mobile devices in real-time and how it compares to the carrier plans purchased. This report will help you save money by preventing overages.

### Comparison Reports

The comparison report will allow you to compare usage between various users, groups, and even compare the data usage between different types of devices.

### Location Tracking and Roaming Control

Location tracking gives management all the necessary tools to be proactive about roaming and minimize unexpected overages. It is also very helpful in tracking down lost or stolen devices. With Roaming Control receive "real-time" roaming alerts and track country, network, location and usage.

## The Industry Leader

With more than 9 million active client licenses in the field, Wavelink is the leading provider of multi-vendor mobile device management, wireless infrastructure management, terminal emulation, voice enabling, proactive telecom expense management and mobile application development software. Wavelink technology solves the unique challenges involved in deploying, managing and controlling today's enterprise mobility systems and facilitates peak performance from frontline staff. More than 15,000 companies in retail, manufacturing, healthcare, government, public safety and logistics industries rely on Wavelink to accelerate application delivery, reduce device management and support costs, and tighten network security. Inside the four walls, or in the field, Wavelink leads mobility.
