

Using the LXE Dual-Ear Wireframe Behind-the-Neck Headset

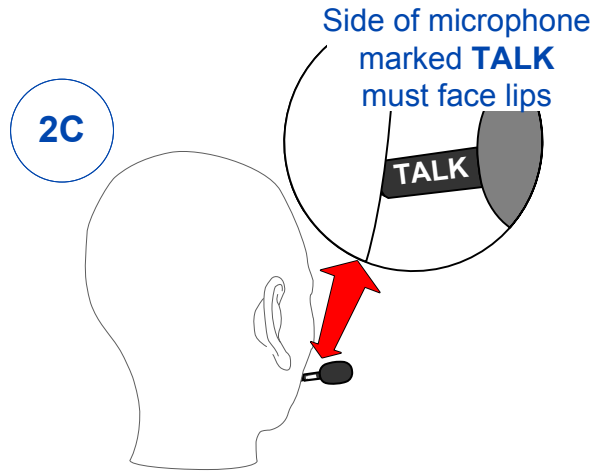

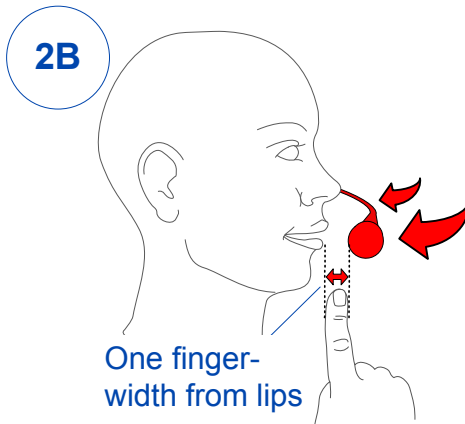

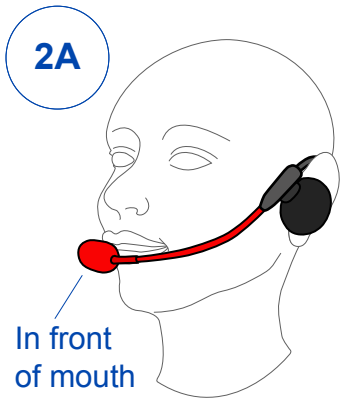

Part No. HX3601HEADSET

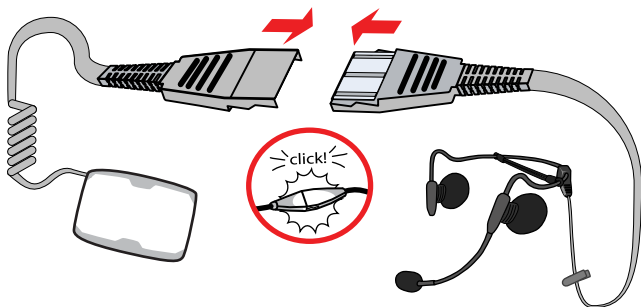

1 Adjusting to fit you

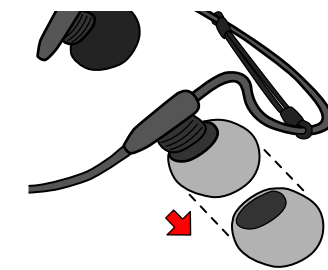

2 Positioning microphone

3 Connecting to client unit

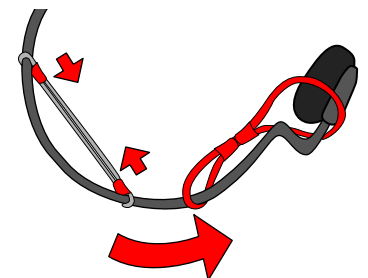

4 Replacing earpads and strap

If earpiece pad gets worn, pull it off and replace it with a new one

If strap gets worn, pull it off and replace it with a new one

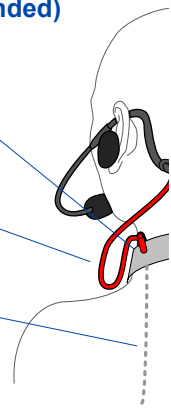

5 Wearing audio cable

UNDER CLOTHING
(recommended)

Clip to clothing

Leave loop so head can turn

Wear cable inside clothing

OR

OVER CLOTHING
(with cable in back)

Clip headset cable to clothing

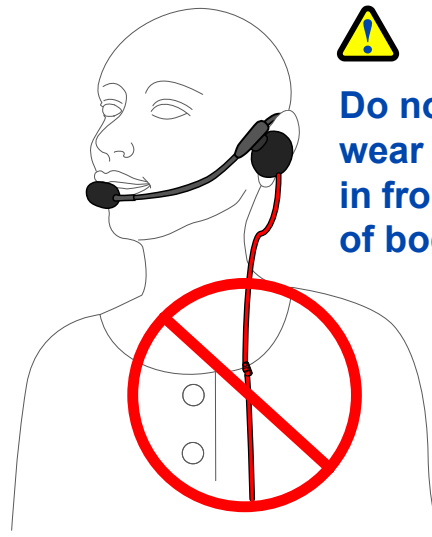

Leave loop so head can turn

Clip lower audio cable to clothing

Wear cable across back

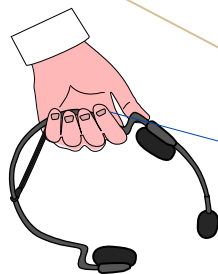

Do not wear cable in front of body

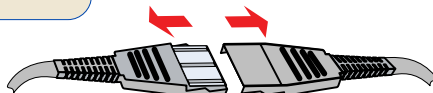

Attach cables securely to clothing so they let you work without restriction and cannot get tangled in something.

6 Caring for the headset

Always use windscreen

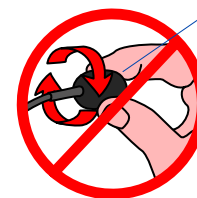

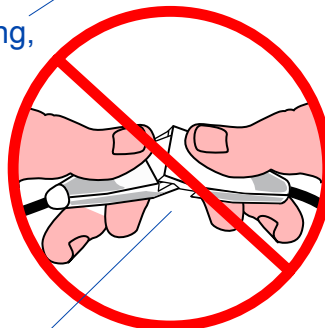

Carry headset by headband, not boom

When disconnecting, pull the connectors apart

Do not snap them

Do not twist microphone too much

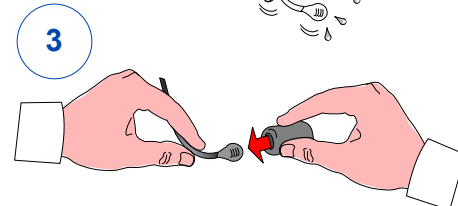

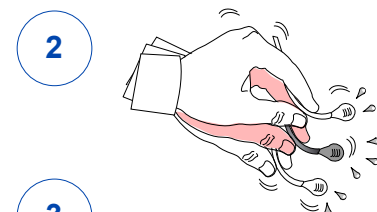

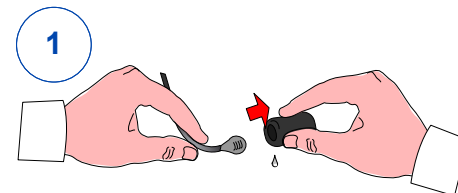

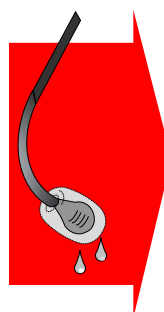

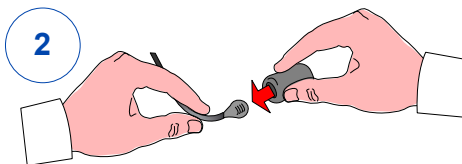

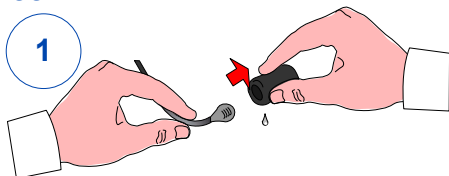

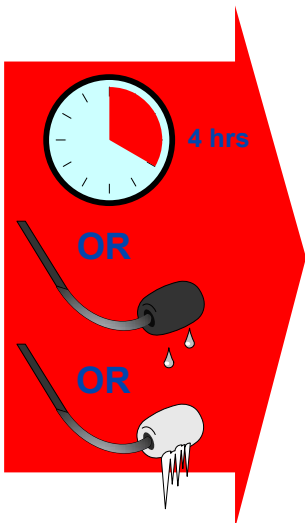

Do not bend boom too much

7 In freezer environments

Every four hours, or when windscreen gets moist or frozen, replace windscreen

If the microphone stops working, it might be too wet. Try removing the windscreen, shaking moisture out of the microphone, and replacing the windscreen with a dry one

Do not squeeze wet windscreen while on boom
