### **Aruba Networks release the latest AirWave Network Management tool – Amigopod Visitor Management**

Melbourne April 19, 2011 – Gamma Solutions are proud to announce the arrival of Aruba Networks' Amigopod Visitor Management which provides easy, scalable and secure guest access onto your wireless infrastructure.

The Aruba Amigopod software is an easy to use visitor management solution that delivers secure wireless access by giving non-IT staff the ability to create temporary accounts for your guests to gain Wi-Fi access. Once a guest (or even an employee with a mobile device) has registered the Amigopod delivers account login credentials via SMS or email. Businesses can set these accounts to expire automatically after a specific number of days or even hours if the guest is only there for a short business meeting.

As this technology is so easy to use any non-IT staff member can set up guest accounts leaving your IT department to focus on other endeavors. Another large bonus of Amigopod is that it is scalable to satisfy the needs of your organisation from small companies with a couple of offices to large hotel chains with hotels all over the country.

"We believe that this is a fantastic addition to Aruba's already extensive product range and will be of real benefit to a large number of companies who previously had nothing to offer their guests to connect them to their network" said Clem Valdez, Technical Service Manager at Gamma Solutions.
