Gamma Solutions Partner with Datamax-O'Neil to sell the E-Class of thermal Printers.

Melbourne August 23rd 2011 – Gamma Solutions is adding the Datamax- O'Neil E-Class of barcode printers to their extensive range of thermal printers. The E-Class Mark III is a family of desktop thermal printers that are designed for a wide range of industries and applications which require a reliable and cost effective barcode printer.

Popular applications for the E-Class printers include; Manufacturing, Retail, Healthcare and Postal Services. Organisations can print product labels, shelf tags, shipping labels and asset identification labels just to name a few. The printers are designed to be easy to use as well as easy to integrate into existing systems and printers.

The media rolls for the E-Class printers are easy to change and the ribbon rolls are three times larger than the competitors which means you will need to change them less often. All of the printers in this class have been manufactured with rugged double wall construction to ensure that your printer will last longer than others on the market.

With printers ranging from the basic model with USB 2.0 and serial connection to the professional+ model with many more choices Gamma Solutions will be able to help organisations find a printer which suits their needs. All E-Class printers are available in either 203dpi or 300 dpi and can be replaced by the owner without the need for tools or experience.

“With both the platen roller and print head being able to be replaced by the end user the need to send the printer to an authorised service centre is required only for major repairs” says Gamma Solutions sales executive Stephen Lakey, “Anytime a printer is taken out of production to be repaired or have print heads changed it costs the organisation time and money so for customers to be able to change these critical parts themselves is a great advantage”

About Gamma Solutions
