Mission
Statement

Gamma Solutions' mission is to supply our customers with innovative solutions designed to provide optimum productivity and efficiency, and through key relationships with world-class manufacturers, offer fair and competitive prices for products and services of a superior quality.

We benefit customers from diverse markets with solutions that make critical operations simple, fast and free from error. Gamma Solutions maintains the highest levels of service and we ensure that our products and services conform to internal and industrial quality standards.

In order to meet our objectives, Gamma Solutions is committed to building strategic alliances with customers and suppliers, founded on our integrity, quality and a proud history of complete customer care.

Gamma Solutions offers advanced mobile data collection technology to allow you to deliver information throughout every facet of your business.

Solutions that enable you to extend your enterprise and allow your workforce to be effective whilst mobile.

turning technology
into a competitive
advantage

Information
Age

We live in an age where information is
a competitive necessity.

Many applications demand instant information.

• JIT
• Supply Chain
• Real Time Decision Applications
• Track & Trace

Gamma Solutions extends real time
connectivity throughout an organisation.

We provide input concepts for:

• Local Area Fixed & Wireless Networks
• Wide Area Networks
• Host Interfacing from Mobile Computers.

Mobile Data
Collection Technology

Mobile data collection technology is
a significant part of modern business.

Customer demand for "real time data" has
eliminated the business acceptance of
historic based data collection concepts.

Gamma Solutions has a range of wired
and radio based solutions for all industry
environments.

Company
History

Founded in 1992, Gamma Solutions has
developed into one of the leading suppliers
of mobile computing and data collection.

Growth and success are based on supplying
hardware, support and expertise.

From end users to complex host interfacing,
Gamma Solutions meets the business needs
of small business and major corporations.

One company for all your mobile data technology needs

Security

Integrity and security are a major factor of mobile
data collection technology solutions.

Mischievous hackers and people targeting
specific clients are now a part of modern
business life.

Gamma Solutions provides sophisticated data
protection concepts and works with your host
supplier to co-ordinate your corporate data
integrity objectives.

Heavy Duty
Hardware

Gamma Solutions, through its partnerships with Intermec, Cisco, Oracle and other reputable suppliers, offers advanced mobile data collection systems.

As a leading Australian vendor of mobile data collection solutions, we provide a diverse range of components suited to many industries.

Our customers are able to choose from:

• Tethered, Wireless and Bluetooth Units
• GPRS and WAN equipment
• LAN Networks
• Handheld Units
• Vehicle Mounted Units
• Printers
• RFID Systems

Gamma Solutions provides industry knowledge and experience for today's mobile workforce

Interfacing and
Standards

Gamma Solutions offers expertise in linking mobile computing solutions to existing corporate standards.

Systems can be developed for interoperatability with:

• Cisco Networks
• Proprietary Networks
• Oracle Systems
• SAP Systems
• Microsoft SQL, Visual Basic, Pocket PC, CE Net etc

Service

A data collection hardware solution requires the highest level of service to back it up. Gamma Solutions offers a variety of options and features to support our solutions.

- In-House and On-Site Service and Support
- Guaranteed turn around time on repairs
- Priority repairs
- A range of service contracts, offering 24 hour, 5 day and 10 day, turnaround
- On-Site or return to depot
- Supply of backup equipment for immediate swap out
- Managed pools of equipment
  - On-Site or at our Service Centre
- Preventative care

Service delivered, maintained and tailored to your business to keep it running to its optimum

Software

Mobile Units Gamma Solutions program and support applications running on hand held units. The support options are tailored to client requirements and can be based on time and material, prime time support or 24/7 phone support.

Interface and range of hosts Our knowledge & expertise covers a wide range of host and interface platforms.

Rental Solutions

Renting provides the flexibility to change platforms and adjust to fluctuations in demand.

Gamma Solutions offers extensive rental options, from additional hand held terminals during your peak periods to complete wireless networks.

Advantages include:
- Capital Conservation
- No Large Up Front Expenditure
- Flexibility to Suit Your Business Needs
- Tax Benefits

LSO Lifetime Support Options

Gamma Solutions offers complete hardware and software service, from consultation and design through to installation and maintenance for mission critical operations.

Working as a partner, Gamma Solutions undertakes the design and delivery of turnkey hardware and software systems, pre-staged and tested, installed and ready for immediate use.

Our technical staff will tailor data collection systems, wireless or not, into your existing networks and inspect and recommend the best hardware, software, network and communication options to fit your existing environment. With many years experience we implement our solutions into your business with as little disruption as possible.

We give you complete confidence in the quality and reliability of our business operations. Our complete range includes technical services and proven expertise in network connectivity and administration, site survey and design, technical and user training, service and repair, telephone support and service level agreements.

"We service everything we sell".

RFID

Radio Frequency Identification tags emit a signal that is read by a tag reader.

RFID tags will replace barcodes in certain applications.

RFID tags can be read through most materials and, unlike bar codes, do not require accurate alignment to a reader.

One major USA food chain has decreed all suppliers using reusable containers for food items must have an RFID tag by 2006.

As standards develop and prices drop the use of RFID tags will grow dramatically.

Gamma Solutions has certified RFID engineers. We provide site consultancy, hardware selection and a wide range of tags.

TCO Total Cost of Ownership

These days capital equipment expediture must be based on a solution that provides the maximum productivity for the investment over its lifetime.

A recent study showed rugged equipment had a 32% lower TCO than lower priced, non rugged, equipment in mobile data collection applications.

This was especially true where the application was built around a larger screen mobile unit.

A white paper on TCO is available from Gamma Solutions.

Whilst technology advances constantly, responsibility for our products never diminishes

A Process
of Responsibility

Ecological considerations are becoming part of electronic manufacturers' commitment to global corporate citizenship.

RoHS is Restriction of Hazardous Substances in manufacture and WEEE is the commitment to ecologically sound disposal of used components (e.g. taking back batteries at end of life equipment.)

Gamma Solutions is working towards significantly relying only on equipment that adheres to RoHS standards.
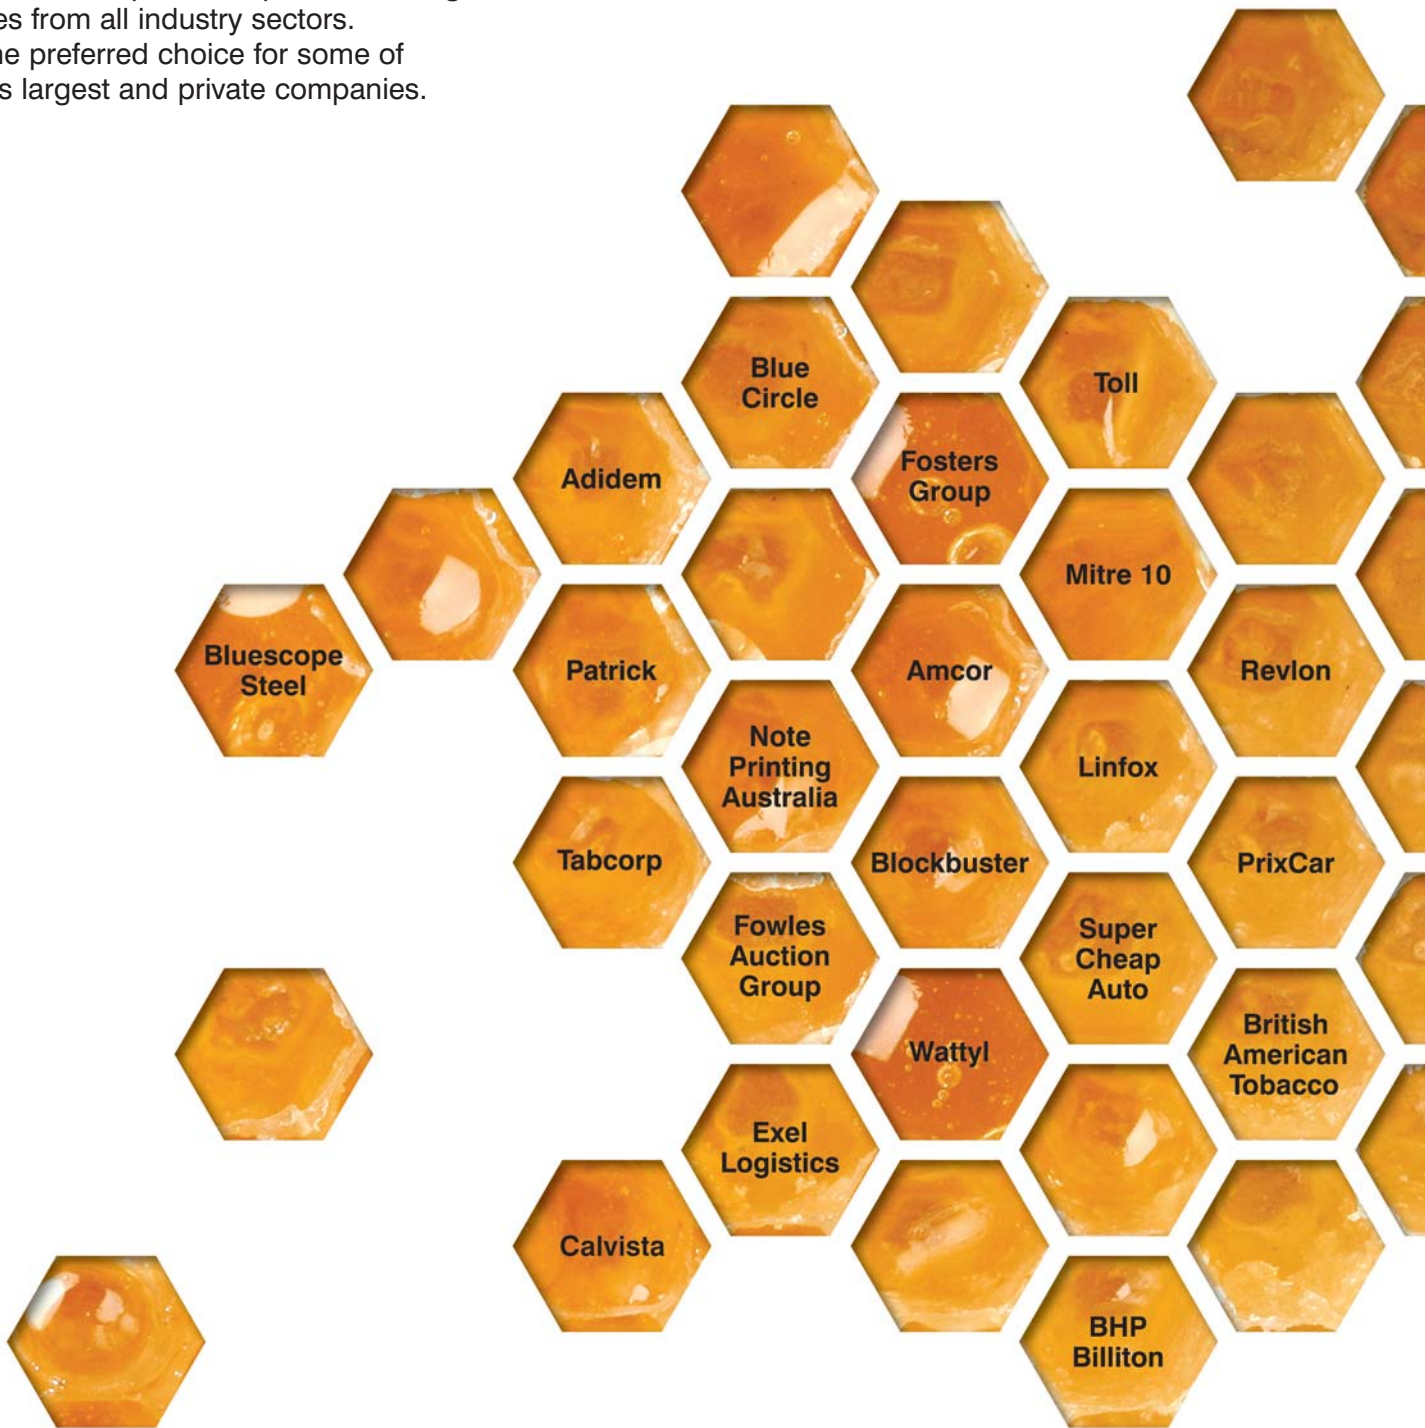

Gamma Solutions undertakes to take back equipment at end of life and ensure ecologically sound disposal.

Matched with the Lifetime Support Options and Total Cost of Ownership ideals, Gamma Solutions believes adoption of RoHS and WEEE type standards will ensure our clients a total hardware and support concept that is ecologically responsible and a sound financial investment.

Preferred
Choice

After more than twelve years, Gamma Solutions continues to foster partnerships with leading companies from all industry sectors.
We are the preferred choice for some of Australia's largest and private companies.
