Gamma Solutions introduces the LXE Marathon,

Melbourne November 2010 – Gamma Solutions is proud to introduce the new LXE Marathon Field Computer. The LXE Marathon field computer introduces a new form factor in mobile computing, with a larger screen size and greater computing power than a PDA, smaller size than a laptop, and multiple data-capture and connectivity options. Taken together, the LXE Marathon field computer provides new levels of usability for the mobile worker in field-force automation, route accounting, and public safety.

Gamma Solutions' Sales Executive Stephen Lakey says "The Marathon is a welcome entry in to LXE's range of mobile computers that fills that important market space between rugged PDA's & laptops. Its rugged design & perfect balance between screen size & ergonomics will make it the stand out product in this market segment over the new year"

The LXE Marathon field computer weighs less than a kilogram, and is powered by an Intel® Atom processor that runs full Windows® 7 or Windows® XP operating systems. It combines multiple built-in data-entry options, including a 7" outdoor-visible touchscreen, full QWERTY keyboard, integrated fingerprint reader that doubles as a mouse, and a high-resolution color camera. The unit's available desk and vehicle SmartDock cradles allow one-handed undocking and user-friendly peripheral interfaces. Additional bolt-on accessories include a mag stripe reader, 2D imager, and extended life batteries for 8- and 12-hour continuous operation, all of which attach securely to the unit while maintaining the overall IP-65 rating for protection against dust and water.

The LXE Marathon field computer connects via Gobi™ WWAN radio. The Gobi technology means the Marathon computer can connect through either GSM- or CDMA-based mobile carriers. The computer can also connect to a local area Wi-Fi network via 802.11 a/b/g/n. Bluetooth connectivity provides users with the potential to connect various peripherals wirelessly.

“Our customers came to us with a need and LXE have solved it with the Marathon. Its extensive options & accessories list will make it ideal for many applications that currently are not catered for in the PDA or laptop space” said Gamma Solutions’ sales executive Stephen Lakey.

About Gamma Solutions

Gamma Solutions Pty Ltd (www.gammasolutions.com) is an Australian owned company, based in Melbourne, with offices in Sydney, Brisbane, Adelaide and Perth. Founded in 1992, the company provides all the components of a mobile computing, RFID and data collection systems such as portable terminals, scanners, printers, wireless networks, middleware software and implementation services.
