

The enterprise solution for client/server based label printing and centralized system management

If your company has many workstations with one or multiple printers or a large number of network printers, it quickly faces **the risk of being cost ineffective and vulnerable**. Unattended, ad-hoc printer networks are also very unreliable. It is almost impossible to create contingency procedures if you experience standstills of your production lines, want to monitor real time printer status or act quickly in case of printer failures.

NiceLabel's answer to these challenges is the **NiceLabel Print Center!**

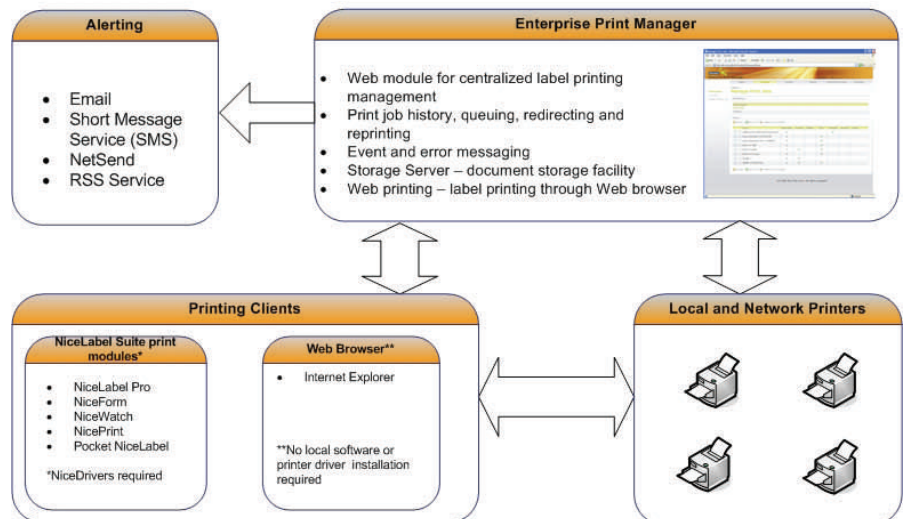

The NiceLabel Print Center is:

- An advanced network edition for label design and printing
- A label printing management solution that offers centralized control of all label design and printing workstations in your network environment

The NiceLabel Print Center enables you to:

- Design and print labels on local computer workstations
- Monitor and log all the print jobs inside your printer network
- Distribute label print jobs from a centralized management interface to all local design and print stations on your network

NiceLabel Print Center Workflow

NiceLabel Print Center is a cost-effective multi-user labeling software that offers flexible licensing based on concurrent users.

NiceLabel Print Center offers you the following benefits:

- **Centralized print job management** – print job queuing, fast redirecting of previously logged print jobs
- **Centralized printer status control** – monitor and optimize your printer network
- **Centralized license management** – manage all NiceLabel licenses throughout the organization
- **Client-based label design and printing** – distribute label design and printing to any client on your network
- **Multi-channel alert system** – learn immediately about status changes or problems with print jobs
- **NEW! Storage Server**— manage and access pre-designed labels stored in server-based document storage facility
- **NEW! Web printing possibilities** – printing from a Web browser without any local labeling software or printer driver installation

Features and Benefits

The NiceLabel Print Center includes two main components:

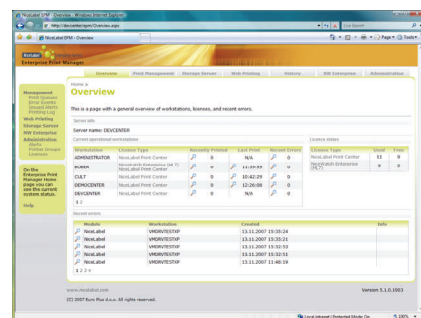

- **NiceLabel Enterprise Print Manager:** The enterprise module for server based printing, centralized document, printer and event management
- **NiceLabel Suite:** A full-featured, modular labeling solution for label design, integration and professional label printing on your local network workstations.

Enterprise Print Manager | The enterprise module for remote printer, print queue, event and alert management

The Enterprise Print Manager is a web-based module that you can access from any workstation on your network or through the Internet to manage your printing process. The Enterprise Print Manager includes the Licensing Server that enables you to manage centrally all licenses of NiceLabel on your network. From the Licensing Server interface you can see how many users currently use NiceLabel, how many licenses are still available; and you can easily upgrade to more NiceLabel users, the NiceWatch Enterprise or a higher NiceLabel Print Center version.

You access the Enterprise Print Manager through a standard web browser from any workstation on the network and perform operations like:

- Remote control over the label printing processes through the company's Intranet and the Internet
- Central print management – printer grouping and status, print queues, print job redirecting
- Logging functionalities – centralized logging of all the information on past print jobs, actions, errors, alerts and other events
- Multi-channel alerting and messaging services – configure email, NetSend, RSS feed and SMS to inform about label print status, warning and errors
- Database housekeeping to manage database size
- NiceLabel Print Center management and NiceLabel client licensing
- Quick reprint of all previously printed labels from any workstation
- Storage Server— server based repository allowing users to access all label related documents

NiceLabel Suite | The full-featured, modular labeling solution for label design, integration and professional printing requirements

NiceLabel Suite provides you with the following modules to design and print your labels on your local workstations:

- Advanced bar code and RFID smart label design with NiceLabel Pro
- Entry-level labeling integration with NiceWatch
- Front-end application design with NiceForm
- Simple label printing user interface with NicePrint
- Label printing software for Windows mobile devices

Server Requirements (Enterprise Print Manager)

- MS SQL Server 2000 or higher; MS SQL Server Desktop Engine (MSDE); MS SQL Server 2005 Express
- MS Windows 2003 Server with SP1 or higher
- Microsoft .NET Framework Version 2.0
- IIS 5 or higher
- At least 512 MB RAM and 2 GB free disk space

Workstation Requirements (NiceLabel Suite)

- 32-bit or 64-bit Windows 2000, XP, 2003 or Vista
- At least 128 MB RAM
- Up to 550 MB free disk space
