

SOTI MobiControl for Android+

SOTI addresses Android fragmentation with MobiControl's Android+ technology. With Android+, SOTI has built tight integration with multiple partners directly into MobiControl enabling you to confidently add the latest and greatest devices to your fleet, whether they are corporate-liable or employee-owned.

Advanced Security Management

MobiControl Advanced Security Center provides administrators with the most comprehensive suite of Android Device Management capabilities. Enjoy granular control over how the latest Android devices are used and how data is accessed.

Web Filter Policy **NEW!**

Enforce and control web access policies to ensure secure, safe and authorized access to web content.

- Configure web filtering policies to block access to specific URLs
- Specify a URL for device redirection
- Create a whitelist of acceptable URLs

Antivirus/Malware Protection Policy **NEW!**

Monitor device file system and installed applications for malware and viruses

- Quarantine infected applications and files on device
- Schedule antivirus scanning, virus definition updates, and quarantine management
- Configure antivirus whitelists

Out of Contact Device Policy **NEW!**

Alert and take action on devices that have been out-of-contact for a period of time.

- Enable out-of-contact policies based on last connection time and enforce device side actions
- Log events, show messages, wipe device, activate data connection
- Enable flexible script-based execution for IT administrators to specify any action currently supported by MobiControl

Phone Call Policy **NEW!**

Whitelist or blacklist specific phone numbers for groups or individual users.

- Enforce granular control over incoming and outgoing calls across device groups or on specific devices
- Import feature for large whitelists or blacklists
- Group blocking of phone numbers and long distance exchanges
- Configure device and server notifications for blocked calls

Secure Content Library **NEW!**

Securely distribute and manage access to corporate documents and resources.

- Upload files to devices and specify destination folder on device
- Manage any file format supported by the device
- Manage file versioning on the device
- Configure on demand and push delivery for file synchronization

Telecom Expense Management **NEW!**

Set up group and individual voice and data profiles to easily monitor mobile data and voice usage limits.

- Configure soft and hard thresholds for notifications on mobile voice and data usage
- Define actions (send notifications to IT admins, trigger device alerts)
- Create groups for further monitoring and action

Terms and Conditions **NEW!**

Standardize and enforce an acceptable use policy, and bring your mobile workforce in alignment with your corporate IT strategy.

- Create custom Terms and Conditions pages on the MobiControl deployment server for device enrollment
- Enforce acceptance of Terms and Conditions to enroll the device with MobiControl
