

SOTI MobiControl for Windows

SOTI MobiControl, the world's most trusted Mobile Device Management (MDM) solution, is equipped with leading-edge features that enable Corporate IT departments to manage, support, secure and track enterprise and employee-owned Windows Mobile and Desktop devices. Backed by over a decade of technological experience, SOTI MobiControl is the most comprehensive MDM platform on the market for organizations to manage their strategic investments in Windows.

Telecom Expense Management **NEW!**

Set up group and individual voice and data profiles to easily monitor mobile data and voice usage limits.

- Configure soft and hard thresholds for notifications on mobile voice and data usage
- Define actions (send notifications to IT admins, trigger device alerts)
- Create groups for further monitoring and action

Terms and Conditions **NEW!**

Standardize and enforce an acceptable use policy, and bring your mobile workforce in alignment with your corporate IT strategy.

- Create custom Terms and Conditions pages on the MobiControl deployment server for device enrollment
- Enforce acceptance of Terms and Conditions to enroll the device with MobiControl

Advanced Security

MobiControl's Advanced Security Center provides administrators with granular control over how mobile devices are used and how data is accessed:

- **Authentication Policy:** Administrators can set user privileges for logging on to the device. User authentication using Active Directory credentials allows mobile devices to be authenticated on the network using the same credentials that end users use for existing computers / workstations. This eliminates the need for multiple passwords allowing seamless centrally managed user authentication management. MobiControl also supports an alternative user authentication system that can be used in situations where Active Directory user authentication is not required.
- **Device Lockdown Policy:** This allows administrators to replace the standard device home screen and Windows Start button with a customizable home screen that allows users to access only specific applications and web sites, and prevents access to all other applications and device controls. This decreases the amount of downtime caused by users changing settings that may adversely affect the operation of the device or application software, and also decreases support costs.

- **Application Run Control Policy:** MobiControl integrates tightly with the operating system to prevent restricted applications from running on mobile devices. MobiControl's Run Control Policies are much more efficient and secure than competing whitelist / blacklist solutions which use CPU and battery to constantly poll devices and shut down restricted programs only after they have had a chance to run and cause damage
- **File Encryption Policy:** MobiControl provides kernel level file encryption that encrypts data stored directly on mobile devices (onboard storage) as well as on SD / memory cards (external storage) to help businesses achieve compliance with strict data storage and processing regulations.
- **Connection Security Policy:** Protects the integrity of the corporate firewall and internal corporate data by enforcing endpoint authentication (i.e. both client and server certificates) and encrypting all data that travels between mobile devices, MobiControl servers and MobiControl Management consoles.
- **Device Feature Control Policy:** MobiControl's Device Feature Control policy allows IT administrators to selectively disable device hardware features. Applying the policy at the individual or group level allows custom profiles for different users and locations in an organization.

Device Provisioning

Using group policies, you can automatically deploy software and data to devices in the field in real-time over any network (Wi-Fi, cellular, cradled, etc.).

Help Desk Tools

MobiControl equips support personnel with powerful remote control and Help desk tools to diagnose and fix problems efficiently.

Location Based Services

MobiControl's Location Services functionality provides the ability to locate, track and gather information of your GPS enabled devices, no matter where they are in the world.

Standalone Authentication

MobiControl features improved standalone authentication that can be used independently or in combination with Active Directory authentication.

File Synchronization

SOTI's data synchronization policies allow organizations to synchronize files and/or folders between devices and a server.
